# SKYE BENEFITS

- Mid to late primocane, starts cropping between Kweli and Kwanza
- Long cane appears well suited to double cropping

Skye is a mid-late autumn, primocane raspberry, highly productive and with high potential to double crop with exceptional fruit quality. The colour is a mid to light red which is maintained after picking. It has great size, shape and flavour. The vigour of the variety is considerable and the canes grow to a good height. The combination of this vigorous growth habit and fruit quality make it adaptable to both summer and autumn harvesting so the variety can be readily double cropped.

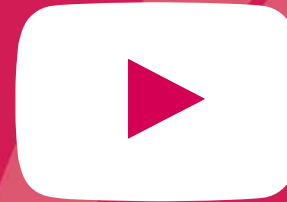

- Excellent feedback on fruit quality
- Large fruit, highly productive, displayed well for easy picking

Skye has a low chill requirement similar to Kweli and Imara. Plants produce tall, vigorous long cane with a short internode distance. Canes produce a high number of fruit/lateral which de-plugs easily. Skye shows promise as a double-cropping variety, producing consistently high-quality fruit with high yield potential in both crops. The combination of high yield potential and the ease of pick can contribute to reducing picking costs.

# GPG

# SKYE OVERVIEW

## Plant Habit

Tall, vigorous canes

## Seasonality

Mid to late primocane, starts cropping between Kweli and Kwanza

## Flavour

Low acidity, sweet vanilla flavour

## Fruit Size

Very large fruit

## Firmness

Very Firm

## Fruit Colour

Mid to light red colour

## Yield

High-yielding variety. Potential to double crop

## Post-harvest shelf life

Excellent feedback on fruit quality

# SKYE OVERVIEW

## Market

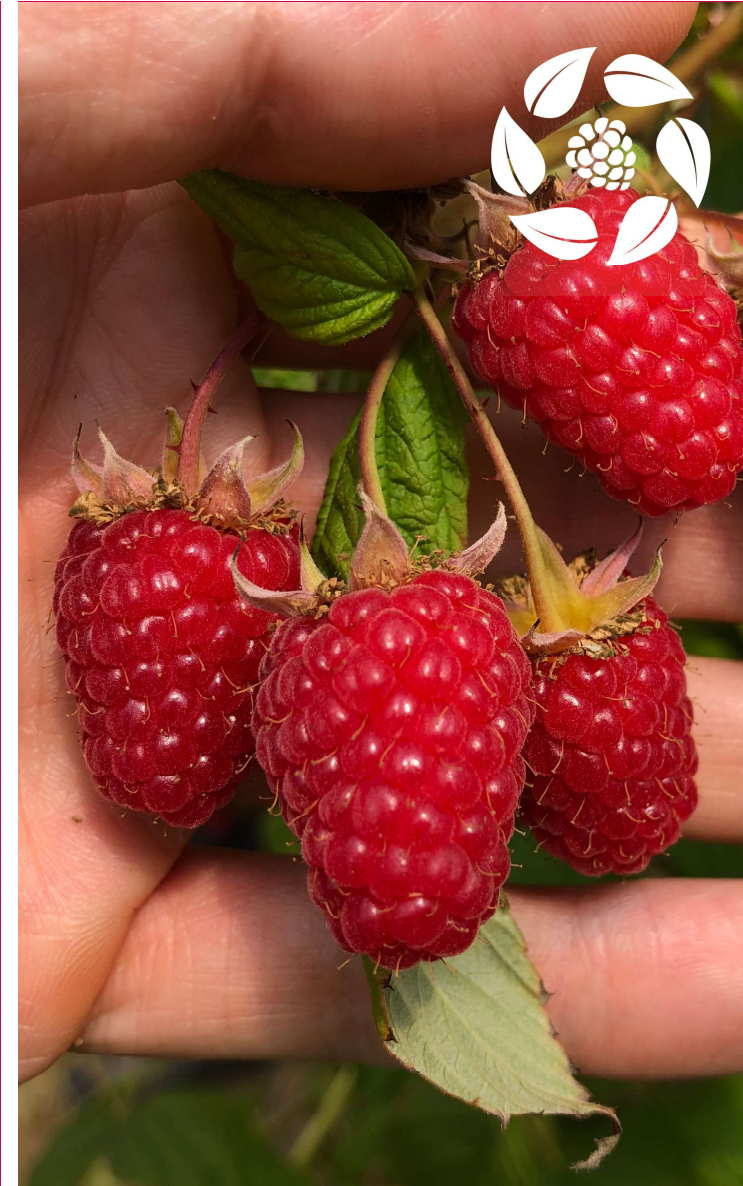

- Skye is suitable as a premium variety in the fresh market sector.
- It is also adapted in the processed fruit market.
- The fruit quality of Skye raspberry makes it ideal for a whole range of international fruit markets. This is in terms of appearance and shelf-life as well as flavour

Table showing Brix levels of Skye raspberry compared to other primocane varieties

	Mean Brix
<b>Skye</b>	10.8
<b>Lewis</b>	10.4
<b>Imara</b>	9.8
<b>Kweli</b>	9.9
<b>Kwanza</b>	10.7

## Offer

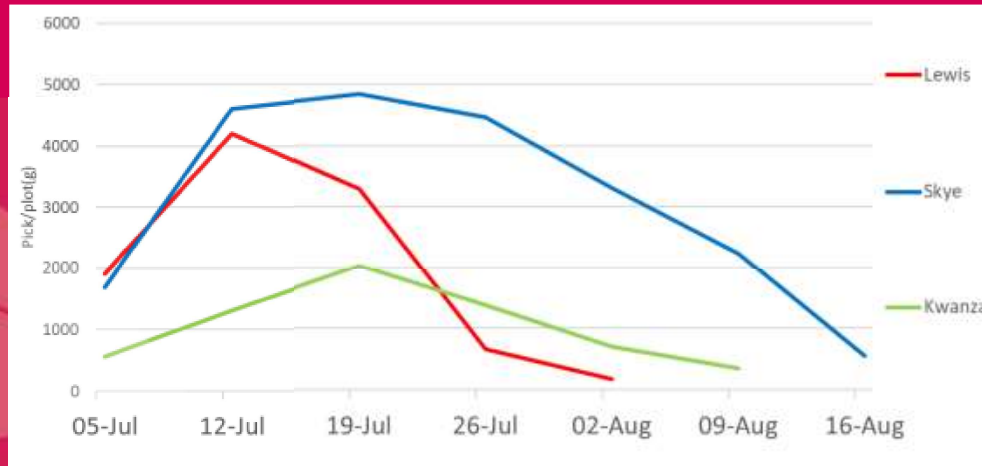

- Global Plant Genetics is the exclusive license holder in a range of international territories.
- See page 9 for details of international sub-licensees

## SKYE REVIEW

"Skye produces a double crop with a balance of productivity and consistent fruit quality in both crops. Growers will appreciate the improved picking efficiency of Skye with the combination of productivity and large fruit size that can be picked easily and quickly from the plant. Skye has scored highly in blind tastings in public events."

Nikki Jennings -Breeder, James Hutton Limited

## LICENCE HOLDERS

Skye raspberry plants can be purchased from the following licensees, according to territory:

Mei-Ami  
Israel, West Bank, Gaza Strip
